COMSATS University · Vehari

6th Semester · Expected 2026

CAREER OBJECTIVE

Driven BSCS student with hands-on experience building production-grade full-stack applications and a strong foundation in AI/ML. Seeking a summer internship to apply real-world engineering skills, contribute meaningfully to a tech team, and accelerate my journey toward AI Engineering.

EDUCATION

Bachelor of Science in Computer Science (BSCS)

COMSATS University Islamabad – Vehari Campus

CGPA: 3.77 / 4.00

2022 – 2026 (Expected)
6th Semester

Relevant Coursework: Data Structures & Algorithms · Object-Oriented Programming · Database Systems · Mobile Application Development (Dart/Flutter) · Machine Learning · Web Engineering

TECHNICAL SKILLS

Frontend	React.js (Vite) · Tailwind CSS · HTML5 · CSS3 · JavaScript (ES6+)
Backend	Node.js · Express.js · REST API Design · JWT Authentication · express-validator · node-cron
Database	MongoDB · Mongoose ODM · SQL (basics)
Mobile	Dart · Flutter (mobile app development)
AI / ML	Python · NumPy · Pandas · Scikit-learn · ML fundamentals
Tools	Git · GitHub · VS Code · Postman · Recharts
Soft Skills	Fast Learner · Technical Communication · Analytical Observation · Team Collaboration

PROJECTS

AdFlow Pro — Gig-Based Service Marketplace

Full-Stack · MERN Stack · Production-Grade

GitHub Portfolio

- Built a Fiverr-like marketplace platform with multi-role workflows (Buyer, Seller, Admin) using React (Vite) + Tailwind CSS on the frontend and Node.js + Express on the backend.
- Implemented escrow-style payment flow, order lifecycle management, and real-time status tracking to simulate a production payment pipeline.
- Integrated automated moderation and content management via node-cron scheduled tasks, reducing manual admin overhead.

- Designed analytics dashboards using Recharts with role-specific views and KPIs for platform health monitoring.
- Secured all API routes with JWT-based auth and input sanitization via express-validator; structured MongoDB schema with Mongoose for scalability.

Student Management System
Full-Stack · Web Application — GitHub Portfolio

- Developed a complete student records management platform covering enrollment, grades, attendance, and course assignment.
- Implemented role-based access control for Admins, Teachers, and Students with secure authentication flows.
- Built interactive data views and CRUD operations backed by a structured MongoDB database.

Doctor Appointment App
Mobile · Dart / Flutter — Mobile App (Dart)

- Designed and built a cross-platform mobile application in Dart/Flutter for booking and managing doctor appointments.
- Implemented patient and doctor dashboards, appointment scheduling logic, and clean Material Design UI.

Plant Disease Detection System
AI / Machine Learning · Python · Computer Vision — AI Project (Python)

- Built an AI-powered image classification system to detect diseases in plant leaves using Python and machine learning techniques.
- Trained and evaluated models using labeled plant disease datasets, leveraging NumPy and Pandas for data preprocessing and feature analysis.
- Applied computer vision concepts to extract visual patterns from leaf images and classify disease categories with measurable accuracy.
- Demonstrated practical AI application in the agriculture domain — a high-impact area for AI engineering in Pakistan and globally.

AREAS OF INTEREST & FUTURE GOALS

AI Engineering	Machine Learning	Full-Stack Dev	Mobile Apps	Data Science

Currently pursuing AI Engineering as a focused discipline starting Summer 2026, building on existing ML foundations in Python, NumPy, and Pandas to transition into deep learning and production AI systems.

WHAT I BRING TO A TEAM

- Production mindset: AdFlow Pro was built with real-world concerns — auth, payments, automation, analytics — not just for coursework.
- Cross-domain skill set: comfortable moving between frontend React, Node.js APIs, MongoDB schemas, Dart mobile, and Python ML pipelines.
- Fast learner: picked up Dart/Flutter, MERN stack, and ML tooling across consecutive semesters while maintaining project delivery.
- Strong observational and communication skills: able to understand complex requirements quickly and translate them into working code.
